*as a percentage of average daily NAV for the quarter valued at Php 3,086,151,971.57

INVESTMENT OBJECTIVE AND STRATEGY

The fund aims to provide liquidity and stable income by investing in peso-denominated money market and fixed-income instruments with remaining terms to maturity of not more than three (3) years and has a weighted average portfolio life of one (1) year or less. The fund will track the performance of the Markit iBoxx ALBI Money Market or IBXXCHOG Index by replicating the characteristics of the benchmark.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

This fund is suited for conservative investors with an investment horizon no more than one (1) year.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

- Credit Risk.** Refers to the risk of losses that an investor is exposed to due to a borrower's failure to pay the principal and/or interest on instruments such as bonds, loans, or other forms of securities. The borrower's inability to fulfil its financial obligations may be due to adverse changes in its financial condition thus, lowering the credit quality and/or price of the security.
- Counterparty Risk.** Refers to the risk of a counterparty defaulting on a contract to deliver its obligation in cash, securities or even services.
- Liquidity Risk.** Refers to the risk of losses that an investor is exposed to due to the inability to convert assets into cash immediately or when the conversion is possible but only at a lower price. Such may be caused by holding securities with small or few outstanding issues, inadequate buyers, infrequent trading activity or underdeveloped capital market.
- Market Risk.** Refers to the risk of losses that an investor is exposed to due to the unanticipated change in the prices of securities or macroeconomic variables that influence the financial markets.
- Interest Rate Risk.** Refers to the risk of loss that an investor is exposed to due to changes in interest rates. The purchase and sale of fixed income securities, for example, may result in a loss because the price of the security may decline if interest rates rise.
- Reinvestment Risk.** Refers to the risk that an investor is exposed to the possibility of getting lower returns or earnings upon reinvestment of maturing funds and/or interest earnings.

- THE UITF IS NOT A DEPOSIT AND IS NOT INSURED BY THE PHILIPPINE DEPOSIT INSURANCE CORP (PDIC).
- RETURNS CANNOT BE GUARANTEED AND HISTORICAL NAVPU IS FOR ILLUSTRATION OF NAVPU MOVEMENTS/ FLUCTUATIONS ONLY.
- WHEN REDEEMING, THE PROCEEDS MAY BE WORTH LESS THAN THE ORIGINAL INVESTMENT AND ANY LOSSES WILL BE SOLELY FOR THE ACCOUNT OF THE CLIENT.

NAVPU GRAPH

* Effective May 01, 2024 - new benchmark is Markit iBoxx ALBI Philippines Money Market [IBXXCHOG INDEX] from Bloomberg Philippine Sovereign Bond Index Money Market [BPHILMM INDEX]. The IBXXCHOG Index reflects acceptable returns on a peso-denominated low risk fixed income portfolio comprising of fixed-income securities with remaining maturity of three (3) months to one (1) year. Relative to the previous benchmark, it is net of taxes, which is a more accurate measure of performance.

OUTLOOK AND STRATEGY

In Q4 2025, the Bangko Sentral ng Pilipinas (BSP) deepened its easing cycle as growth weakened, and inflation remained firmly below target.

Headline inflation averaged about 1.6% during the quarter, extending its run below the BSP's 2–4% target, driven largely by softer food prices, particularly rice. Growth momentum slowed materially, with GDP expanding by 4.0% year on year in Q3, the weakest pace outside the pandemic since 2011, reflecting weak investment, softer consumption, and lower government spending. Against this backdrop, the BSP delivered two 25 basis point rate cuts, lowering the policy rate to 4.50% and reinforcing its shift to an accommodative stance. While the central bank described the December cut as an insurance move and signalled that the easing cycle may be approaching its later stage, subdued inflation and lingering growth risks continue to justify a supportive policy bias.

Peso bond yields mostly fell across the curve with benchmark rates closing at:

- 5.37% for the 2-year (-19 bps),
- 5.79% for the 5-year (-8 bps),
- 6.07% for the 10-year (+4 bps), and
- 6.41% for the 20-year (-2 bps).

With the BSP nearing the end of its easing cycle, short-term rates are expected to remain broadly stable, with any further policy moves likely gradual. Inflation should stay within the 2–4% target range, supporting a steady yield environment while the fund maintains a focus on liquidity and capital preservation amid near-term volatility.

³ Returns are net of fees.

⁴ Duration measures the expected change in the portfolio's bond prices to a 1% change in interest rates.

⁵ Volatility measures the degree to which the Fund fluctuates vis-à-vis its own average return over a period of time (standard deviation of returns).

⁶ Tracking Error is the volatility of the returns of the Fund over and below the returns of its corresponding benchmark (BPHILMM INDEX from inception to April 30, 2024 and IBXXCHOG INDEX from May 01, 2024) (standard deviation of excess returns of the Fund vis-a-vis its benchmark). The lower the Tracking Error, the closer the Fund's composition is vis-à-vis its benchmark. A Tracking Error equal to 0% means the Fund is fully replicated to its benchmark.
