*as a percentage of average daily NAV for the quarter valued at Php 199,812,542.99

INVESTMENT OBJECTIVE AND STRATEGY

The Fund aims to achieve higher income and capital growth by investing in Philippine government bonds with an average portfolio duration of greater than five (5). The Fund will track the performance of the Markit iBoxx ALBI Philippines 5+ Total Return Index or IBXXPHP5 Index by replicating the characteristics of the benchmark.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest. This Fund is suited for moderately aggressive investors with an investment horizon of more than five (5).

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

- **Credit Risk.** Refers to the risk of losses that an investor is exposed to due to a borrower's failure to pay the principal and/or interest on instruments such as bonds, loans, or other forms of securities. The borrower's inability to fulfil its financial obligations may be due to adverse changes in its financial condition thus, lowering the credit quality and/or price of the security.
- **Counterparty Risk.** Refers to the risk of a counterparty defaulting on a contract to deliver its obligation in cash, securities or even services.
- **Liquidity Risk.** Refers to the risk of losses that an investor is exposed to due to the inability to convert assets into cash immediately or when the conversion is possible but only at a lower price. Such may be caused by holding securities with small or few outstanding issues, inadequate buyers, infrequent trading activity or underdeveloped capital market.
- **Market Risk.** Refers to the risk of losses that an investor is exposed to due to the unanticipated change in the prices of securities or macroeconomic variables that influence the financial markets.
- **Interest Rate Risk.** Refers to the risk of loss that an investor is exposed to due to changes in interest rates. The purchase and sale of fixed income securities, for example, may result in a loss because the price of the security may decline if interest rates rise.
- **Reinvestment Risk.** Refers to the risk that an investor is exposed to the possibility of getting lower returns or earnings upon reinvestment of maturing funds and/or interest earnings.

- **THE UITF IS NOT A DEPOSIT AND IS NOT INSURED BY THE PHILIPPINE DEPOSIT INSURANCE CORP (PDIC).**
- **RETURNS CANNOT BE GUARANTEED AND HISTORICAL NAVPU IS FOR ILLUSTRATION OF NAVPU MOVEMENTS/ FLUCTUATIONS ONLY.**
- **WHEN REDEEMING, THE PROCEEDS MAY BE WORTH LESS THAN THE ORIGINAL INVESTMENT AND ANY LOSSES WILL BE SOLELY FOR THE ACCOUNT OF THE CLIENT.**
- **THE TRUSTEE IS NOT LIABLE FOR ANY LOSS UNLESS UPON WILLFUL DEFAULT, BAD FAITH OR GROSS NEGLIGENCE.**

OUTLOOK AND STRATEGY

In Q1 2026, global and domestic macro conditions shifted materially over the course of the quarter. Relatively benign inflation conditions early in the quarter gave way to a sharper reassessment in March, as renewed geopolitical tensions in the Middle East reignited energy-driven inflation pressures and narrowed the scope for further monetary easing.

Headline inflation averaged 2.8% during the quarter, remaining within the Bangko Sentral ng Pilipinas' (BSP) 2–4% target band. Inflation dynamics, however, deteriorated sharply in March, with headline inflation rising to 4.1% year on year, breaching the target range for the first time since mid-2024. The upside was led by fuel-related pass-through to transport, electricity, and related services, while core inflation firmed, pointing to early broadening pressures.

Domestic growth remained soft, with GDP slowing to 3.0% year on year in Q4 2025, weighed down by weaker government construction spending and softer household consumption. In response to subdued growth conditions, the BSP delivered a 25-basis-point policy rate cut earlier in the quarter. However, in anticipation of heightened inflation risks toward quarter-end, the central bank convened an off-cycle meeting and kept the policy rate unchanged, underscoring the supply-driven nature of inflation and revising its outlook toward higher inflation and slower growth.

Peso bond yields rose broadly across the curve, with benchmark rates closing the quarter as follows:

6.03% for the 2-year (+68 bps)	6.97% for the 10-year (+91 bps)
6.72% for the 5-year (+95 bps)	7.01% for the 20-year (+60 bps)

Looking ahead, the balance of risks has shifted. While economic growth remains subdued, elevated energy prices and the risk of broader inflation pass-through limit the BSP's scope for near-term easing. Policy decisions are expected to remain highly data dependent, with inflation trends and global developments playing a decisive role in shaping the rate outlook. In this environment, the fund will maintain a cautious and defensive stance, preserving flexibility through higher liquidity levels and selectively deploying capital during periods of market dislocation and yield normalization.

³ Returns are net of fees.

⁴ Duration measures the expected change in the portfolio's bond prices to a 1% change in interest rates.

⁵ Volatility measures the degree to which the Fund fluctuates vis-à-vis its own average return over a period of time (standard deviation of returns).

⁶ Tracking Error is the volatility of the returns of the Fund over and below the returns of its corresponding benchmark (BPHIL INDEX from inception to April 30, 2024 and IBXXPHP5 Index from May 01, 2024) (standard deviation of excess returns of the Fund vis-à-vis its benchmark). The lower the Tracking Error, the closer the Fund's composition is vis-à-vis its benchmark. A Tracking Error equal to 0% means the Fund is fully replicated to its benchmark.
